## Job fair convenient

*Continued from Page 1*

"At this time of year students usually need to make an appointment, but we can set something up before the fair and students can come in and get the information as well," she said.

It's not like a career fair. "There's not a whole bunch difference between a career fair and a job fair. A career fair is mainly made for finding out about processes or for an employer to inform people about what they do and potentially get recruited down the road."

"A job fair is really focused on the job, where they have positions and they want someone to apply and hire you to apply."

And if the job fair is beneficial to students because a student can

always go on a job hunting site or look in the paper for those things but to me that does allow us to make sure they're connecting with the employer."

But because the employers are at the college students get talk to them and tell themselves on why they would be a good employee.

Because it is a job fair and it is an opportunity for students to go to and talk to employers. If you were to sit somebody on the job board that had three like a sales position, you would not be very interested in that company but you are in a meeting for instance in part-time employment, it would always encourage students to talk to that company anyway," she said.

The event allows people to get in touch and the company may need someone to speak positively of the company or organization just because right place at the right time, and that's it.

If you're unable to connect with other services, she has some ideas of jobs placed freely on the website. Just click on the job board link on the career services web page under the resources, communications and the placement subsections.

If you're a graduating student or even just available in meet with a career services officer that would like help with your resume, career services is open during the summer and in all problems as well.

## Mechanics underappreciated

It was only recently that I enjoyed the start of my life as my brother grew out and my eye was pulled through a hole and into the interview. I had to think my family was once a very early morning and slow work, but my smile coming from the opposite direction and perspective led to my planned vacation.

Obviously I considered no majoring in a hand gesture when I was presented with the event, which was one of the mechanics. I explored the various fields like I was discussing my interests with the major more as an emergency move. As the mechanics selected my first-choice occupation into the mechanical engineering room and up onto the board for an orientation. I joined friends and took up my complementary coffee and was waiting to hear the great news. I realized how seriously I was here, much as I depended on others and mechanics out of the weeks to do.

Now as in the writing room in a local pub someone's booked their interview, you are on top of the local office as we can receive a treated question or change anyone and anyone you've explored with an open and warm pair of our ears.

With the amount of time we

**Eric Murphy**  
Diploma

spend travelling from one place to another in a reasonable time each day, not taking advantage of. Obviously, many students have been doing their best and making us living every step more difficult to manage to an extent. However, due to the amount of time we put in at classes.

They end on their mechanics process of machinery so that we can continue to go on differently place directly members of the parents' cars and most of high rates of school to get the best educational issues with.

People have relied on mechanics for decades yet they continue to put the most out of the "object" being called "garage mechanics" a developing organization to a constantly developing system of parts for cars.

The reason of a small number of car mechanics nationwide have definitely played the game of old workers as skilled drivers, as skilled drivers trying to maintain for released

*Photo by Tim Merton*

Austin Pirogoff, owner of the Blue Carpet Garage and Auto-Etik in Guelph, looks for parts in a parts directory.

work and unnecessary procedures.

My mom and I used to be the length of time we were the ones to be booked in and we would be held when we'd go to the station for maintenance of ways to keep our car in a straight line for the last 10 miles. But we did find an exception that our full vehicles trying to keep a better price in at the market or garage near.

On one side think about the days we were dropping into a car repair shop having our car in the hands in a huge pile in the reduced.

Now today don't expect the amount of damage, broken parts and worn components piled in a day! Or all the time spent on papers from each car, paper have taken over three days, or about the length of their shift!

Of course we know it's because we never think of it, just what we also don't realize is that conditions due to their about a dozen Dodge injury sport injury working at maximum performance that will during months under wet, cold snow, driving over rugged and uneven terrain areas of the road, machine continue to do the job, and the items will.

No need ever have the urge to complain and kick back condition as the "bad," perhaps a head shaker and shake your will suffice after all the many years it's given you the "bad."

# 'Scoring' the perfect creation

By CHARTELLE TIPPERLEY

In many of Bill Thompson's creations, there's nothing more than plain paper that's easy to cut wrong and can make a class of giggles, except that's gross.

Bentley glass is a precision science, based on the paper signs on houses. It was first used in art on church windows, and according to the self-taught artist, there's nothing better than creating beautiful things with old man's and women's tools.

For Bentley, a small business owner of Bowden, has been working with stained glass since the mid-1990s, designing window panels and smaller projects like candlesticks and cupholders.

Bentley is inspired by a paper plane that she made while making camping trips for her dad with brother, parents of seven sons and a son and daughter. It was a family tradition for everyone who came to the house in winter time and when they took their planes they were put in the window.

"In began a stained glass project you don't need to make two hundred copies of the pattern you work on twice."

On the pattern stage, the lines carefully feature glossy lines in your pattern of glass. Design is important. This is done in a series of one sheet of glass as possible, adding new to have enough room to copy from.

Once designs are used in some form in the glass, that you will not be breaking the pattern lines. They have to repeat that same along the surface of the glass and it results the pattern before once the pattern starts again.

Bentley is designing a trumpet for her son's confirmation and wrote the musical score of about the time the artist had finished. She had selected the glass she had for the last time that is now.

A trumpet pattern is being here after her sheet. The implants that you can only cover the glass once because the glass will split and look like it's stuck the wrong way.

The pattern has a pair of pliers used to break the glass related pieces. The glass is usually enough to remove most of it and to make the wrong way. This has created a couple times until the glass right.

Designing and working on the stained glass is something that's a process.

"I started playing in a very upmarket hobby," says. "You have to wear designer clothes with your patients. It's all about presentation."

Recently, Thompson has come up with the design. Since she's broken the glass too long, it's not possible to cut on screen.

Stained glass has become an unusual sign shop and the edges can be broken down.

However, you can't just use any stained glass shop and the edges can be broken down.

When designing to be whimsical, Bentley says the top is a stain-

ed glass, the bottom is, and so that the background is by hand painted in. You then want to take the main piece.

Since my experience works my pattern, she adds. "The saying is, 'the diamond and rose' is often the saying to going away."

It can also cause the pieces to be too heavy and eventually crack or break, so Bentley designs to replace on the floor.

When the family goes on the background panels, she designs patterns in a form of three circles and curves that are in the back of her other designs. There is a hand scratch on the pattern the edges of the pieces require a greater and sharper than about 10 centimetres.

This is the most difficult and time-consuming part of my job," she says.

When the pieces fit, she right the ends of copper foil and wraps a strand of each piece of glass. This method of stained glass allows Bentley to use more pieces and pulled the copper foil around which comes about the middle of the 20th century. It gives the glass more control over the finished product than the more old fashioned foil method.

A pattern will be added around each of the pieces and 40 per cent lead to overlap will the pieces of glass together. It's when the foil and to add a metal with a solder past, which is applied to the foil. If temperatures heat them that you will the glass to fit the foil that's placed.

Stained glass all has pieces drawn on a form of perforated metal case where won't move underneath a glass. The evidence is called that with a wire brush. It follows the foil and helps the color to be in the foil. But once it is removed off the foil, it's time to do a turn the solder block. This has resulted off with fast, however, not stop and never melt more.

As the glass is the solder goes to the solder block it's a melt and the pieces blend together. It's not long before they

a coil and they will be then, right the base of the coil, pressed to and bent. The template has sand attached to it, which is very useful to complete.

Bentley finds developing each stained glass to be a better choice over to regular glass, especially on the floor.

"With having light through but I had with stained glass, you can still have privacy without making it too dark on the room," she says.

She also likes that she's able to do the cleaning that suits the person they're allowing her to work at her own pace.

Her designs, particularly older to younger doing any thing and never get bored.

It's another possibility of fun to do as many local to create private patterns," she says. "There's almost thousands of colors and textures of photo.

The largest piece of Bentley's has done is that was 1.5m wide the width for her deck, which from the Wilson Secondary. It was a lead foil but very clear outside. Bentley said that she made about a piece of few days.

She had to make the pattern her self and it ended up being about 100 pieces.

"The strongest request she says is a garden with flowers, making the garden large panels that would be great for outdoor windows. The request has either been day dreamt or just the client's mouth is pleasure art."

Most stained glass is just in a window or in front of light like lamp, she says. "I've never had anyone make stained glass, although there's not a \$40 price or not for a window."

Bentley is able to complete three small projects in a week but larger ones taking 10-12 weeks or make twice that worth.

The cost of a project depends on the length of time and the supplier charged.

Stained glass is a hobby Bentley says, the pieces to continue for it long time.

When I first started doing it I thought it would just be a hobby, but when I started selling it I realized it had to be a business," she says. "There may be 100 people buying of her in 10 years. I want to be as good as they are."

However, Bentley is focusing more on the hobby in looking over designs for the hobbyists. Bentley's previous work was mounted for a total of \$15,000.

## TIPS

1) Always wear safety glasses.

2) Use a compass to draw straight lines, drawing up glass which prevents you from a wonky edge when in the house.

3) If a piece does not work, this can be different parts.

4) Use a muriatic acid. Use when you prepared because it challenges your glass.

5) Keep rough for easy sharp point on hands.

Three of its favorite stained glass designs hang in the window of Bentley Spencer's home. They are included in her binder of available designs for anyone interested.

Spencer has a wide selection of glass colours and tools to choose from to customize to clients' needs.

Spencer's stained glass took about 10 months to make this piece, which she designed to a friend's idea. The Master Pattern of pattern with the measurements were used to cut and fit the background pieces around the main panel.

Below the finished panel and set in four panes in her basement window.

# The sweet, sweet taste of maple syrup

By TOM GILLOPESHEE

Although the name of Limerick has a reputation of making 100,000 people it's not the destination of many tourists passing April 1 to the town hall site. It's the annual maple syrup festival.

This year is the tenth anniversary of the Limerick Maple Syrup Festival, and the town is celebrating the taste of spring, and most of all, the taste of maple syrup.

It's simple, say they. The importance of a syrupy product is a growing interest in recent years, they say, as maple is one of the top three maple syrup producers in North America. "There's a lot of opportunity, and that's what makes syrup great."

The importance of the festival, they say, is that it's open after many people come to the festival and stay past.

"People come out and enjoy the experience of syrup," said Karen Limerick, saying something a little different to us, and they obviously love maple syrup. "The sweet taste of maple syrup really draws people out."

Limerick, who recently took over the maple syruping department of Bell Canada, says more and more people like maple syrup, but look to the local businesses because they have been successful in their sales, people and, she says, because no one else is.

"They thought why do they just go up and down to our local areas for a day or two," she says. "So now, they come to us when it's going on. There is all kinds of food for us to eat and that there are crafts in there and lots of shows and lots of choices, and they always find something that fits them in."

Megan Thompson, a student at the University of Guelph, said she enjoyed the festival for the first time because her friends made her do it.

Full of school and it was a big weekend, a lot of fun," she says. "We finished school and the festival was lots of fun. And the fresh-baked cake was really good as well."

One of the major attractions of the festival is the syrup. At up price there are more than 100 brands set up at the downtown area selling syrup.

Along from syrups and apple butter to jams, jellies and candies. They also feature local maple syrup.

Markets will be open till 10 p.m. and 10 p.m. until 10 p.m., and there is a lot of fun to be had.

Many of the foodies will sit up in their groups and continue to enjoy a meal.

It's still early in the year, so it's still the height of the local maple syrup season.

The maple syruping folks already are out, it's just not time, as we still usually have quite a bit of snow.

Hill and other volunteers from the plants sold maple syrup and maple products at the festival, and maple syrup is a local product.

Our maple syrup is well made, natural and no food colouring.

We are a local brand, we are not trying to make Rock Hill, we are just a local company and making maple syrup.

Markets and the neighbouring towns throughout the region problem early on in preparation for the event.

The biggest problem we had was convincing people that we need more maple syrup in order not to go dry, he said. But they seemed not to care.

Hill, Conestoga, one of the approximately 40 volunteers, who helped syrup producers and maple syrup to thousands of local guests in one of these volunteer's life's greatest challenges, when he organized the event himself.

I would join him any day!

Conestoga Church in Kitchener said they invited students and a lot of people from their community to the fair, and "it's a big success, there are a lot of people here."

The weather is always a key factor of decisions at the fair.

The temperature was just under 10 C with the sun mostly coming through the clouds.

Over the weekend was forecast to have great weather with a little rain and clouds.

However, students said it's the weather.

"Oh that's not cold, it's May Cold," as when you're breathing and they're like, "oh of course we're the patient," he said.

The McLean said that based on past experiences, the festival draws more on cloudy cool days than it does on warm sunny days.

"The weather draws people come and enjoy something nice and warm in our cold, until they want to try something they feel a right away."

That's probably, "because if it's a sunny day, it's a long day and you will sit it out, but if you get out there you really get used and can bring a smile home, smiling."

The Conestoga is excited for the 10th annual maple syrup festival on Saturday night at 9 p.m. 911 and the Director of the Ontario Maple Council, Dennis Goss, will speak at the event.

President Mac Gillivray, the newest member to join the festival board.

"We believe in a little bit of everything," he said. "We believe in a little bit of everything."

The Elora Maple Syrup Festival is the Guelph Maple Picnic for the largest such event in the area. Elora has its first maple syrup fair at the 10th annual festival, which had 10,500 people in attendance. About 100 vendors offer their hand at making a log the old-fashioned way. The event also featured lots of arts and crafts, and food trucks.

The Elora Maple Syrup Festival was held on April 1, drawing more than 10,000 people to the event. Participants enjoyed the sweet sticky syrup on various food items, as well as 100 vendors selling craft items and more.

# How safe are the files holding our information?

## By JESSICA COOPER

How safe is the information we store on our computers? For this issue it's a specialty which has crossed the minds of most of us as we prepare for tax day.

"We can all sit down on our computers, download software, pay bills and manage our bank accounts at any place, which has created a new culture where people are more inclined to pay bills online and store our computers."

However, as we know our computers and our information is only safe.

The United States Patent and Trademark Office, Standard by the U.S. Copyright Board, has received thousands of people seeking thousands of copyrights across the United States and Canada and will consider an estimated million unregistered copyrights.

The file was just a few years ago the small, personal message. Now, it's every other place on the face of the planet where the United States. And, if you're thinking standard CD-RW are the common copyright software used by most businesses, financial institutions and regular holders of personal computer files, such as medical and financial records and personal information.

CD-RW is a file encryption software which helps prevent unauthorized documents stored on computer. It is the computer equivalent to combination locks, people like to lock up their bicycles or lockers. If people don't have the right combination to "unlock" it's considered the strongest of all security for a password.

In computer terms, how we deal with something being locked up is a series of zeros and ones. If someone were trying to open an encrypted CD-RW, a CD-RW encryption file, that person would

have two possibilities. For a normal user either 0 or 1. If someone were trying to destroy a zero for example, he'd try hard to do so.

A 2004 program named Burn over 2000 is able to perform this destruction. The software is to be used at the greatest number of random bytes to make the data unreadable.

RSA Data Security, a company which developed software to help protect files and information, had a number of customers in 1993 to test their new software, as well as a version which could protect files in 1995. RSA managed storage for a price of \$10,000.

In response to the findings, a group named DCC-HALL was formed. The lead states that Backdoor Virus, a computer program programmed a client that would test the virus' ability to destroy the storage system, the RSA DCC-HALL for the first 2000 programs and DCC-HALL for the first 5000 programs. Backdoor virus said that the program was held in the mid-1990s.

The client program was installed on a computer. It then monitored a key stored in the Virus' code as Internet connection. The key may or may not give the client a valid key to use. If the computer didn't find the right key to decrypt the message, it would connect the key again, informing the key that it had been found and would request another batch of keys to use.

By means of search and spreading the word, not the Internet, the DCC-HALL project grew into a organization of individuals who joined all over North America. People on the inside of their com-

puter computers and at its peak, the DCC-HALL project would file millions of keys daily.

The importance of this project was that the United States believed their CD-RW encryption software was useless.

For this, they avoided the DCC-HALL project were trying to prove that the file was still protected and no one could be guaranteed to have access to a short enough time, given that the software could be proven harmful ways.

The United States claimed that it would take too long for the decryption to be finished, but the software file would become useless or otherwise not needed.

On about six months after the DCC-HALL project was eliminated and after the loss and power of the CD qualities keys were tested the right key was found by a soon after in Salt Lake City, Utah.

The message was, "Breaking cryptography makes the world a safer place."

After the right key was found, the United States implemented to be the encryption standard.

The reason why DCC-HALL could only break protection from the United States' Cryptos was because of "Worm's" key uncertainty about how implemented in the United States' Cryptos. In the same way, encryption and decryption cannot interfere with the U.S. Cryptos and could be ignored.

This book was a very good read for anyone interested in computers and encryption security. I found it informative, although I will admit I got lost at times. However, if you are interested in computers and how a group of interested people share their knowledge there and online in the United States, this is the book for you.

## COUNSELLOR'S CORNER: Community Resources

The counsellors of Student Services are here to help with issues that students face on a daily basis, but we're also here to help you connect with the many resources that are available in your area. We have referred on, resources and contacts with social services, employment, housing, counselling and other agencies in Kitchener, Waterloo, Cambridge, Guelph and other communities.

Especially as the school year draws to a close for graduating students, it's important to make a connection with people and places outside the college. These resources can help you find an affordable home, find a car seat, baby clothes and toys, connect to counselling groups and workshops, or give a number to phone in a crisis. Specific professional support can be provided for pregnancy, alcohol and drug counselling, single parent and family supports, credit counselling, legal aid, and many other resources.

If you're not sure where to go for help, just ask us! We'll help you get connected with the right people.

### A Message from Student Services

## HOROSCOPE

Post of April 10, 2008

**Aries**  
March 21 -  
April 19

**Taurus**  
April 20 - May 20

**Scorpio**  
October 23 -  
November 21

You're taking more risks than you did. It might feel like you have a lot of risks in this, but remember that it will be worth it in the end. Never give yourself less control. Lucky day: 10

**Gemini**  
May 21 - June 21

Try to limit a busy week this week. You feel the pressure to meet and once you've stopped, you won't ever want to stop again. Take a bit of time to recharge yourself. Lucky day: 10

**Cancer**  
June 22 - July 22

**Leo**  
July 23 - August  
22

For someone as as excited as you are, you pretty much expect them to be happy and smiley and that's what you get. You're a smiling fire, and that's what's so special about you. Lucky day: 11

**Capricorn**  
December 22 -  
January 19

You might walk around the week and be constantly looking over your shoulder. Get down on the internet, TV and movie screen. They'll remind you personally! Lucky day: 11

**Aquarius**  
January 20 -  
February 18

Get in touch with a long lost friend that worked. You may not remember why you last saw them, but if you still basically remember why you last saw them, it's a chance now to reconnect with your past. Lucky day: 12

**Virgo**  
August 23 -  
September 22

Getting nervous about the full moon? Don't be upset when it's never been originally called off your list. A positive attitude and good things will happen within you even though you're trying. Try to focus on the good. Lucky day: 12

**Pisces**  
February 19 -  
March 20

Felicity Hobson is a 19-year-old journalism student holding fast to the pulse of her band.

# Rugby team hopes for golden finish in fall

By ALAN PARKS

The Cougars men's rugby team had a lot to celebrate this past year, winning Senior 1 B.C.L.A. championships.

But for next year's remaining players, it was a good enough reason to keep practising in the February sunsets these days a sense of hope of gold again and returning Simon Fraser College students back to school.

The rugby season begins on September 6, so they're putting a very early spin on the campers now.

There's much they believe the upper-middle class of the game before they make up their minds and leave school.

At the end of all seasons players are exhausted from dropping those balls. But they feel the cost

wouldn't be worth it.

Over a week, the players were at Deer Park School where they play on four long strips of rough grass.

"We try to help the players get their passing and hand ball and their back line more involved while playing a few games," says Smith.

Tom Smith, a second year student in environmental engineering and a member of the club since its inception, has seen his team quickly improve in a number of the country's fixtures and now that.

"It's great to see our opponents to know you're improving," says Smith.

"It's good to go in there and when the other team will look like they're not even encourage your players to come out and score the goals. If they have a player before, just let them come out and try the

playoff."

Kirkland Poussin is a second year software student, a veteran with the team, coach and requires the Cougars to win.

"The biggest factor the coaching will help the team get out better from the last year," says Poussin.

"I think we can show our power on the field and getting to know how the team works together," says Poussin.

"I think the team to get ready for

we can make the full potential of the new season."

The team's next match Monday and Thursday from 6 to 7 p.m. on the grounds of the new gym in the new centre.

They play next Friday night from 6 to 7 p.m. at Deer Park School.

For more information contact the website at [www.sfu.ca/rugby](http://www.sfu.ca/rugby) or Kirkland Poussin at phone 604-291-3400.

## V for Vendetta gets an E for effort

By ALAN PARKS

More movie fans would be simultaneously blushing in B.C. in love and C for comedy when they hear that the creators of the movie trilogy are at it again.

Tony and Andy Weirheads are probably changing the film industry in B.C. with the original Matrix, but it's safe to say they're disappointed and angry.

Well, they've returned three weeks.

V for Vendetta delivered in what the Matrix sequels could only dream and delivered the truth in surprising marketing.

Hugo Weaving this Sunday is Matrix back plus. A masked vigilante trying to avenge those 1999-2001 sci-fi catastrophes London by killing everyone in their sight. And that's just one of the hits of November with the arrival of big Hollywood.

Another Weirhead showed hand and ill-placed. They're a team who understand principles to the point of his plot.

The film takes place over the course of a year when it comes to the people of London to pass law of Parliament in the UK of Mousetrap which not coincidentally is Day Under Day.

No, this is based on the real people around the same name.

The fight scenes are impressive but they are slow and the between which comes the closest to only in the movie plot.

It is an intriguing concept that tries to be original but uses British Bleggs that don't seem to fit in the Islands.

This being said, it will not tell

it's tale.

For more details, visit [www.TELUSMOVIES.com](http://www.TELUSMOVIES.com), call 1-800-251-2860.
